

Hello,

We will soon be upgrading the electricity network in your area. The upgrade is to ensure a safer, more efficient electricity supply to your property.

Some of the items adding more demand to your area:

Heat pumps

EV charging

Solar panels

Higher volume
of usage

We will be visiting your home to provide you with more information about the works and answer any questions you may have.

Further information

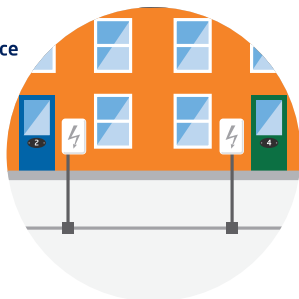

Why are the works taking place?

The network in your area is based around a looped supply, where properties share their supply of electricity. As the demand for electricity increases, we need to split these supplies so every property has its own unique supply.

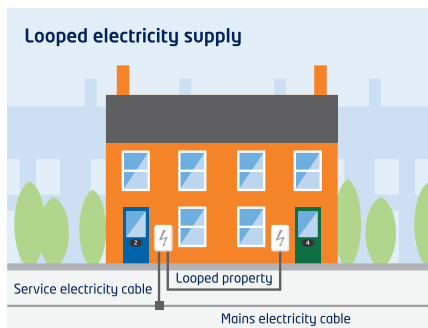

What to expect

- A project organiser will be on site during the works for any queries you may have and they will complete a site survey in advance to explain the works to you in more detail.
- A technique called 'Moling' (a trenchless method used to lay cables) will be completed up to your outdoor electricity cabinet. This will reduce the disruption on your landscape.

New service electricity cable

Looped electricity supply

Thank you for your patience and understanding.
