1. Introduction

These Service Terms relate to the Company's procurement of Flexibility Services on its electricity distribution network.

The transition to net zero is expected to increase overall electricity consumption as heating and transportation moves to electric sources. With the generation of electricity from renewables close to the sources of consumption, the Company is experiencing increasing peak demands and a change in power flows from the traditional one-way power flow to bi-directional flows. At the same time, the take up of new technologies and solutions such as electric vehicles, electric heating, and energy storage is increasing. These changes are leading to significant increases in peak demand that create constraints on some parts of the Company's electricity distribution network. With all these changes, the Company (like the other Distribution Network Operators), is preparing for significant growth in the use of Flexibility Services to help manage the network in a cost-effective way. The Company is procuring flexibility to ensure the power flow on its network remains within its capacity. The ability to shift power generated or consumed to alter the power flow on particular lines means the Company gets the best use out of its network. For example, by reducing the peak power consumption and spreading this over different parts of the day, overall, the network is being used more and the Company is reducing the need for carrying out capital intensive reinforcement projects. To aid our transition to decarbonisation, the Company procures flexibility Services from service providers to manage forecast network limitations, planned or unplanned outage events. To aid our transition to decarbonisation, the Company procures flexibility Services from service providers to manage forecast network limitations, planned or unplanned outage events.

The Company procures the following services:

- Peak Reduction
- Operational Utilisation
- Variable Availability + Operational Utilisation
- Scheduled Utilisation

Figure 1: Invoicing and Payment Timeline for Self-Billing and Invoicing options.

5.2 Charges

5.2.1 Pricing for any Service which a Provider is participating shall be sent via email to the Provider by the Company's Flexibility Services Procurement Platform and shall be subject to the terms and conditions of these Service Terms.

For further information on contract pricing, ITT, tools and documents can be found here²

5.3 Calculation of Charges

5.3.1 Charges shall be calculated in line with the relevant Flexibility Market Rule as applied by the time of Trade. The relevant performance factors will be those listed in the Flexibility Markets Catalogue at the time of Trade.

5.4 There are two types of Flexibility Services payments: Utilisation Payments and Availability Payments. The application of the payment type depends on the Flexibility Service product being delivered.

Utilisation Payments

5.4.1 Utilisation Payments are made when a Utilisation Instruction is issued by the Company. Utilisation Payments are considered in terms of:

- (a) for every metered time period, energy (MWh) delivered supplied by the Provider and multiplied by the Utilisation Fee (£/MWh); or,
- (b) the capacity (MW) delivered multiplied by the Utilisation Fee (£/MW) over a period-of-time.

5.4.2 Where the Provider has not fully met the volume of the Utilisation Instruction, an additional Performance Multiplier is applied to determine Utilisation Performance and how much delivery is eligible for payment.

5.4.3 The company reserves the right to amend the factors outlined in paragraph 5.4.7 and will make changes to these factors known ahead of Trade Opportunities becoming available.

² : [Flexibility Services Document Library \(enwl.co.uk\)](https://enwl.co.uk/Flexibility-Services-Documents)

Availability Payments

- 5.4.4 Where Availability is applicable to a flexibility service, payments are paid for every Accepted Availability Window in respect of the contracted DER. Availability Payments are subject to a Monthly Utilisation Performance Factor.
- 5.4.5 Availability is determined by:
- (a) for every metered time period, the Agreed Availability Capacity (MW) multiplied by the Availability Fee.
- 5.4.6 Where a Service Provider declares Unavailability, or was not Available at the time of delivery, then no Availability Payment will be made for that metered time period.
- 5.4.7 Availability Performance is calculated monthly and Availability Payments are recovered should the delivered capacity be lower than the agreed delivery capacity. In order to determine the recovery, the Provider's calculated Monthly Utilisation Performance Factor is applied to the Availability Payment.

Further information and ENA documentation on standardised products can be found here³

5.5 Payment Terms

- 5.5.1 In consideration of the provision by the Provider of the Flexibility Services in accordance with the terms of this Agreement, the Company shall pay to the Provider the Charges.
- 5.5.2 All invoices shall be paid by month end of the following month of the date of invoice (the "Due Date for Payment").
- 5.5.3 If the Company intends to pay less than the sum stated as due in the self-billing invoice it shall, not later than five (5) Business Days before the Due Date for Payment, give the Provider notice of that intention by issuing a notice which shall specify both the sum that it considers to be due to the Provider at the date the notice is given, or the sum which it considers is due from the Provider to the Company, and the basis on which that sum is calculated.
- 5.5.4 Unless otherwise agreed in writing between the Parties, payment of invoices shall be made by the Company either (at the Company's option) by BACS payment to a bank account nominated in writing by the Provider or by cheque sent to an address nominated in writing by the Provider (or, where no such address is nominated in writing by the Provider then to the Provider's registered office).

6. Baselineing

- 6.1 In association with the ENA Open Networks Project, we have developed a range of default baselining methodologies (DBMs) which can be used across the industry when measuring and settling flexibility services dispatch contracts.
- 6.2 The methodology for baselining will be agreed between the Company and the Provider post contract award and ahead of any service provision, this shall occur at least (2) months prior to the first Utilisation Period.
- 6.3 Baselines will be set in alignment to those in the relevant Flexibility Market Rule as applicable at the time of Trade

7. Sites & DER

- 7.1 Details of the Provider's DER are to be submitted to the Company through the Company's designated Flexibility Services Dispatch Platform, as further described in Appendix 2 of the Company's latest requirements.⁴
- 7.2 Where a DER forms part of a successful Trade, the Company will confirm such trade within the Flexibility Services Procurement Platform.
- 7.3 Should the Provider wish to change its DER post Trade Award, this can be accommodated through the Company's Flexibility Services Dispatch Platform, as further described in Appendix 2 of the Company's latest requirements.
- 7.4 The Company will allow the inclusion of additional sites at any time throughout the Term. Such changes to DER shall take effect not earlier than the following operational period. These sites will need to complete a full technical qualification for the constraint management zone they are to be utilised for.
- 7.5 Providers will not be compensated for participation above the Accepted MW stated within the Trade Award without prior written authorisation from the Company.

9. Performance Monitoring

9.1 Metering Standards

Metering standards will align with the relevant Flexibility Market Rule as applicable at the time of Trade

For Asset Point Metering, the Provider will ensure compliance with the following metering standards set out within the most recent published relevant Balancing and Settlement Code of Practice Eleven (CoP11): code of practice for the metering of balancing services assets for settlement purposes:

- the metering 'accuracy requirements';
- the 'asset meter calibration test certification';
- the 'limits of error';
- the 'sealing' requirements.

For Boundary Point Metering, the Provider should be compliant with Balancing and Settlement Codes of Practice 1, 2, 3, 4, 5 and 10 as applicable.

Further information on the Balancing and Settlement Code of Practice Eleven (CoP11) can be found on the Elexon Codes of Practice standards.⁵:

If requested by the Company, the Provider shall provide evidence of compliance with the above standards. This may be in the form of certification, photo, or written confirmation.

9.2 Performance Report

A performance report will automatically be generated by the Companies Flexibility Services Dispatch Platform following successful receipt of metering data as defined within section 5 of these services terms.

Baselining for Measuring Actual Delivery

Certain products rely on minute-by-minute granularity for accurate performance monitoring and settlement. Where an alternative to minute-by-minute granularity is provided, the data may be

disaggregated. As such, this could result in performance monitoring and calculation inaccuracies. Responses will be calculated on the number of full minutes of response.

9.3 **Testing and monitoring**

Testing will need to be conducted at least (30) days prior to the beginning of the contracted delivery window. The company also reserve the right to request additional Proving Tests (test of ability to deliver a response) at its discretion. Utilisation payments will apply for successful proving tests as requested by the Company.

Utilisation payments will not be paid for unsuccessful proving tests or where the test is required as a result of a previous service failure.

9.5 Service Failure

Please refer to the Performance Monitoring table for specific parameters
Each of the following shall constitute a Service Failure:

- 9.5.1 Reduced Capacity: if a unit providing Flexibility Services fails to deliver Flexibility Services in accordance with Utilisation Instructions at a delivery performance of at least 63% over 2 months or for three (3) dispatches, whichever is sooner.
- 9.5.2 Unavailability level: if a unit providing Flexibility Services is Unavailable and has more than 30% of [agreed availability] of the Service Period in a month;

9.7 Auditing

The contracted DER performance will be audited using two validation methods:

- a) The submitted metering data by the Provider;
- b) The company reserve the right to utilise any alternative validation methods such as smart meter data, Company owned metering data and or SCADA systems.

Note: The Company may repeat the assessment process on an annual basis.

9.8 Additional performance obligations

Not Applicable (N/A)

9.9 Non-delivery and under-delivery

- a) An under-performing period is one where the minimum performance threshold has not been reached. A reduced Utilisation Price is payable for each under-performing half hour between the event Start and Stop times.
- b) The minimum performance threshold is 63% of the instructed power charge.
- c) The Utilisation Price payable for under-performing periods will be as calculated in the payment calculation table referenced in Section (5.3.7) of these Service Terms.
- d) No Availability Payment will be due for periods where the minimum performance threshold has not been reached.

Definitions

The additional terms placed within the Service Terms shall also apply to these associated Annexes.

Annex 1 – Flexibility Management Systems/Technical Requirements

A1.1 Company Flexibility Management System Details

Electricity North West operates its flexibility requirements via email or API transfer. Via the data transfer flexibility providers are able to declare if their Distributed Energy Resource (DER) is Available or Unavailable and submit associated meter readings. The Company will use the data transfer system to accept declarations and instruct utilisation events.

A1.1.1 The technical requirements together with the Service Terms and associated documents will apply to Providers adopting the automatic approach using the Company's designated Flexibility Services dispatch platform.

A1.1.2 For information, the Company's standard associated documents can be viewed within the Flexibility Services Document Library.⁶

A1.2 Dispatch Principles

The Provider acknowledges that, in the event that Demand Response declarations from multiple contractors (including the Provider) for the Flexibility Services within a Zone exceed the Company's overall peak Demand Response MW requirements for such Flexibility Service and Zone, then whilst the Company will, use its reasonable endeavours to issue instructions for dispatch in accordance with the 'Acceptance & Dispatch Principles', there is no guarantee that the Provider will be Utilised during a constraint event.

A1.3 Response Time

This section explains how the payment mechanisms for providing Flexibility Services work based on the Response Times. Worked Examples for each of the response scenarios set out below are provided in Section 5.

This section only applies to Dispatchable Services, namely Operational Utilisation and Operational Utilisation & Variable Availability; It does not apply to Pre-Scheduled Services, namely Scheduled Utilisation and Peak Reduction. Responding after a Dispatch Instruction by the Company

Depending on how quickly the Provider responded to the Company's Utilisation Instruction, compared to the Contracted Response Time, the following payment mechanisms will apply:

Contract reference number: ENWL-DSR1

- a) If the Provider's Actual Response Time following the issue of a Utilisation Instruction by the Company is less than the Contracted Response Time (i.e., the Provider fully achieved the Requested MW for Dispatchable Services), then the Provider will be entitled to full payment. No payments will be made during the ramp-up time. The Provider will receive payments for delivering their Services from the minute the Contracted Capacity or Requested MW (as relevant) was achieved, which, for avoidance of doubt, can be before the Contracted Response Time
- b) If the Provider's Actual Response Time following the issue of a Utilisation Instruction by the Company is after the Contracted Response Time (i.e., the Provider did not fully achieve the Requested MW for Dispatchable Services or the Contracted Capacity for Pre-Scheduled Services within the Contracted Response Time), but the Provider had started delivering their Services within the Contracted Response Time, then the Provider will be entitled to payment but performance multiplier factors (explained in Section 5) will apply as relevant for under-delivery from the end of the Contracted Response Time.
- c) If the Provider's Actual Response Time following the issue of a Utilisation Instruction by the Company is after the Contracted Response Time (i.e., the Provider did not fully achieve the Requested MW for Dispatchable Services or the Contracted Capacity for Pre-Scheduled Services within the Response Time that they declared in their contract), and the Provider had not started delivering their Services within the Contracted Response Time, then
 - i) If in the meantime the Company has issued a STOP Instruction, the Provider will not be entitled to payment.
 - ii) If the Company has not issued a STOP instruction, then the Provider will be entitled to payment, but performance multiplier factors (explained in Section 5) will apply as relevant for under-delivery from the end of the Contracted Response Time.

A1.3.1 Responding after an Adjusted Utilisation Instruction by the Company

The Company can issue an Adjusted Utilisation Instruction to increase or decrease the Requested MW (Adjusted Requested MW). The Adjusted Utilisation Instruction can be issued before or after the end of the Contracted Response Time. Also, the Adjusted Utilisation Instruction can be issued before or after the Provider has started delivering their Service following the initial Utilisation Instruction. When the Company issues an Adjusted Utilisation Instruction, the Provider must adjust their response and achieve the Adjusted Requested MW within the Adjusted Response Time (this is the period that starts from the minute the Company issues the Adjusted Utilisation Instruction and has the same duration as the Contracted Response Time (in minutes)

Depending on how quickly the Provider responded to the Company's Adjusted Utilisation Instruction, compared to the Adjusted Contracted Response Time, the following payment mechanisms will apply:

- d) If the Provider's Actual Response Time following the issue of the Adjusted Utilisation Instruction by the Company is less than the Adjusted Contracted Response Time (i.e., the Provider fully achieved the Adjusted Requested MW within the Contracted Response Time), then the Provider will be entitled to full payment. No payments will be made during the ramp-up time.

- e) If the Provider's Actual Response Time following the issue of the Adjusted Utilisation Instruction by the Company is more than the Adjusted Contracted Response Time (i.e., the Provider did not fully achieve the Adjusted Requested MW within the Adjusted Contracted Response Time), but the Provider had started delivering their Services within the Adjusted Contracted Response Time, then the Provider will be entitled to payment but performance multiplier factors (explained in Section 5) will apply as relevant for under-delivery from the end of the Adjusted Contracted Response Time.
- f) If the Provider's Actual Response Time following the issue of an Adjusted Utilisation Instruction by the Company is after the Adjusted Contracted Response Time (i.e., the Provider did not fully achieve the Adjusted Requested MW within the Response Time), and the Provider had not started delivering their Services within the Adjusted Contracted Response Time, then
 - i) If in the meantime the Company has issued a STOP Instruction, the Provider will not be entitled to payment.
 - ii) If the Company has not issued a STOP instruction, then the Provider will be entitled to payment, but performance multiplier factors (explained in Section 5) will apply as relevant for under-delivery from the end of the Adjusted Contracted Response Time.

STOP Instruction

After the issue of a STOP Instruction by the Company (i.e. during the ramp-down time), the Provider is not entitled to payment.

The Company can issue a STOP Instruction to the Provider, at any point.

A1.4 Conditions Precedent

- f) The Provider should be able to deliver and manage, upon the Company's request, a net reduction in the Demand or an increase in the Export, as seen by the distribution network.
- g) The Flexible Resource should have the ability to act (provide a response) reliably and consistently, in both magnitude and duration, throughout the contracted windows.
- h) Generators and electrical Storage, greater than 16A per phase, looking to export to the network will need to have a long-term parallel connection and be compliant with the requirements of EREC G59 or EREC G99.
- i) Generators and electrical Storage, less than 16A per phase, looking to export to the network will need to have a long-term parallel connection and be compliant with the requirements of EREC G83 or EREC G98.

A 1.5 Minimum Requirements

Version 3.2

April 2025

Contract reference number: ENWL-DSR1

The Flexibility Services procured are for a decrease in import or an increase in export. The following requirements are required for participation:

- a) Each Site/Group must be in one of the zones detailed within the Tender.
- b) Each Site/Group must be minute-by-minute metered, or an agreed equivalent e.g. Half Hourly. Certain products rely on minute-by-minute metering granularity for accurate performance monitoring and settlement. Where an alternative to minute-by-minute granularity is provided, the data may be disaggregated. As such, this could result in performance monitoring and calculation inaccuracies.
- c) For dispatchable resources, each Site/Group must be able to respond within (15) minutes of receipt of a dispatch signal.
- d) Pre-Scheduled services will be dispatched as part of a pre-defined schedule and as such the Provider should self-dispatch the agreed capacity at the agreed time.
- e) Where Energy Efficiency measures are utilised, there will be no dispatch command issued, Providers are expected to provide an enduring reduction in demand.
- f) Each Site must be built (i.e. commissioned) and have a connection agreement with final milestone one month prior to the start of the performance window.
- g) Provision of the service must not put the Provider in breach of other agreements (e.g. connection agreements).
