

This project devised new voltage control settings, particularly for sites with large amounts of generation connected, to allow faster connection of generators to enable us to offer voltage managed connection contracts.

 Consumer vulnerability	 Net zero & energy system transition	 Optimised assets and practices	 Flexibility and commercial evolution	 Whole energy system
---	--	---	--	--

## Benefits

-  Reinforcement Deferral
-  Facilitates connection of LCTs
-  Alternative connections for generators
-  Offers voltage managed connections
-  Carbon Reduction

 <b>Timescales</b>	<p style="text-align: center;">Start: <b>Nov 2015</b>      End: <b>Jul 2019</b></p> 
--	---

 <b>What next</b>	<p>We have updated our voltage control policies to include the new settings for generators and are continuing work on the voltage managed connections.</p>
